Evolutionary Biology, Vol. 10

Evolutionary Biology, Vol. 10

The first volume of Evolutionary Biology was published ten years ago. Since that time ten volumes and one supplement have appeared. The contents of all these volumes are listed in the back of the current issue. As stated in earlier prefaces, we are continuing the focus of this series on critical reviews, commentaries, original papers, and controversies in evolutionary biology. It is our aim to publish papers primarily of greater length than normally published by society journals and quarterlies. We therefore invite colleagues to submit chapters that fall within the focus and standards of Evolutionary Biology. The Editors vii Contents 1.

Evolution of Species Diversity in Land Communities R. H. Whittaker Introduction	I
Observations.	1 Concepts and Measurements I
6 Birds	6 Plants 10
Interpretation.	21 Application.
27 Birds	" 27
Plants and Their Associates	37 Desert Lizards
43 Equilibration	44
Succession and Climax	45 Component Communities
46 Islands.	47 Major
Taxa in Geological Time.	48 Biosphere Diversity
49 Conclusion	53 Summary.
54 References	55 2. Randomness, Time Scales, and the Evolution of Biological Communities M.
Levandowsky and B. S. White Introduction	69
Thresholds and Time Scales in Systems Dominated by a Few Species.	
72 Auto-Oscillation of a Laboratory Population	73 Periodical Cicadas.
74 Spruce Budworm Outbreaks	77
Spatial Structure: Red Tides and Plankton Patchiness.	83 ix x Contents Many-Species Systems:
Stability, Succession, and Hierarchic Organization	93 Kinds of
Stability.	93 Examples: Field Experiments with Natural
Communities	103 Effects of Randomness 108
Equilibrium Point Models
