Light and Water: Radiative Transfer in Natural Waters

Curtis D. Mobley

Light and Water: Radiative Transfer in Natural Waters Curtis D. Mobley

Light and Water offers an extensive treatment of radiative transfer theory in a format tailored to the specific needs of optical oceanography, emphasizing physical comprehension and practical application, rather than mathematical rigor alone. Mobley presents his unique framework for understanding and predicting underwater light fields with care and precision, developing concepts to facilitate understanding of mathematically dense material. Numerical techniques for solving various radiative transfer equations are explained in settings that are realistic approximations of nature. Extensive references and problem sets are provided.

Light and Water interweaves two levels of discussion. The first, suitable for all oceanography graduate students, develops the basic theory and reviews the current literature on optical oceanography. The second, which will appeal to researchers in the field, develops numerical methods for solving radiative transfer equations. Throughout, the text emphasizes applications of radiative transfer theory to practical, relevant, and realistic problems.

Key Features

- * Develops radiative transfer equations to include transpectral effects, internal surfaces, and surface effects
- * Explains in detail the equations governing the propagation of visible light across air-water surfaces and within water bodies
- * Summarizes the optical properties of natural waters in forms suitable for input into radiative transfer predictive models
- * Provides numerical methods for solutions of radiative transfer equations in settings that are realistic approximations of nature
- * Illustrates the nature of underwater light fields and their dependence on water optical properties and external environmental conditions

From reader reviews:

Doris Seavey:

Typically the book Light and Water: Radiative Transfer in Natural Waters has a lot of knowledge on it. So when you read this book you can get a lot of gain. The book was written by the very famous author. The author makes some research before write this book. This specific book very easy to read you will get the point easily after scanning this book.

Micheal Ruiz:

People live in this new day of lifestyle always try to and must have the spare time or they will get wide range of stress from both day to day life and work. So , once we ask do people have spare time, we will say absolutely yes. People is human not just a robot. Then we ask again, what kind of activity do you have when the spare time coming to you of course your answer can unlimited right. Then ever try this one, reading guides. It can be your alternative throughout spending your spare time, the actual book you have read is actually Light and Water: Radiative Transfer in Natural Waters.

Terrence Kimball:

Your reading sixth sense will not betray you, why because this Light and Water: Radiative Transfer in Natural Waters book written by well-known writer who knows well how to make book that may be understand by anyone who have read the book. Written inside good manner for you, leaking every ideas and publishing skill only for eliminate your hunger then you still hesitation Light and Water: Radiative Transfer in Natural Waters as good book not merely by the cover but also from the content. This is one guide that can break don't judge book by its include, so do you still needing a different sixth sense to pick this!? Oh come on your reading sixth sense already told you so why you have to listening to yet another sixth sense.

Janet Kline:

Don't be worry should you be afraid that this book will filled the space in your house, you can have it in e-book means, more simple and reachable. This Light and Water: Radiative Transfer in Natural Waters can give you a lot of friends because by you looking at this one book you have point that they don't and make you more like an interesting person. This kind of book can be one of one step for you to get success. This reserve offer you information that maybe your friend doesn't realize, by knowing more than additional make you to be great individuals. So , why hesitate? We should have Light and Water: Radiative Transfer in Natural Waters.
