Walk Through Combinatorics, a (Fourth Edition) Miklos Bona

This is a textbook for an introductory combinatorics course lasting one or two semesters. An extensive list of problems, ranging from routine exercises to research questions, is included. In each section, there are also exercises that contain material not explicitly discussed in the preceding text, so as to provide instructors with extra choices if they want to shift the emphasis of their course. Just as with the first three editions, the new edition walks the reader through the classic parts of combinatorial enumeration and graph theory, while also discussing some recent progress in the area: on the one hand, providing material that will help students learn the basic techniques, and on the other hand, showing that some questions at the forefront of research are comprehensible and accessible to the talented and hardworking undergraduate. The basic topics discussed are: the twelvefold way, cycles in permutations, the formula of inclusion and exclusion, the notion of graphs and trees, matchings, Eulerian and Hamiltonian cycles, and planar graphs. New to this edition are the Quick Check exercises at the end of each section. In all, the new edition contains about 240 new exercises. Extra examples were added to some sections where readers asked for them. The selected advanced topics are: Ramsey theory, pattern avoidance, the probabilistic method, partially ordered sets, the theory of designs, enumeration under group action, generating functions of labeled and unlabeled structures and algorithms and complexity. The book encourages students to learn more combinatorics, provides them with a not only useful but also enjoyable and engaging reading. The Solution Manual is available upon request for all instructors who adopt this book as a course text. Please send your request to sales@wspc.com. The previous edition of this textbook was also translated into Korean and adopted at various schools.

From reader reviews:

Elizabeth Hager:

Now a day folks who Living in the era exactly where everything reachable by talk with the internet and the resources in it can be true or not involve people to be aware of each data they get. How individuals to be smart in obtaining any information nowadays? Of course the solution is reading a book. Reading through a book can help folks out of this uncertainty Information specially this Walk Through Combinatorics, a (Fourth Edition) book since this book offers you rich information and knowledge. Of course the info in this book hundred pct guarantees there is no doubt in it you probably know this.

Lourdes Tyner:

The knowledge that you get from Walk Through Combinatorics, a (Fourth Edition) may be the more deep you excavating the information that hide inside words the more you get interested in reading it. It doesn't mean that this book is hard to be aware of but Walk Through Combinatorics, a (Fourth Edition) giving you joy feeling of reading. The article writer conveys their point in certain way that can be understood through anyone who read the item because the author of this guide is well-known enough. This particular book also makes your own vocabulary increase well. So it is easy to understand then can go along, both in printed or e-book style are available. We suggest you for having this Walk Through Combinatorics, a (Fourth Edition) instantly.

Laura McCallum:

The publication with title Walk Through Combinatorics, a (Fourth Edition) has lot of information that you can find out it. You can get a lot of gain after read this book. This kind of book exist new knowledge the information that exist in this reserve represented the condition of the world at this point. That is important to yo7u to be aware of how the improvement of the world. This particular book will bring you with new era of the glowbal growth.
