Concurrent Scientific Computing (Texts in Applied Mathematics)

Eric F. Van De Velde

Concurrent Scientific Computing (Texts in Applied Mathematics) Eric F. Van De Velde

This text covers the fundamental issues of developing programs for scientific computation on concurrent computers. Its purpose is to construct a conceptual framework that is a basis for understanding the real issues of concurrency. The core problems are often buried by mountains of technical detail. The conceptual framework allows us to cut through non-issues. It is, therefore, a basis for developing new numerical methods and new software tools that solve the real problems. Anyone who wishes to use concurrent computers should benefit from this text. Because the book covers numerical algorithms, an elementary background of linear algebra and advanced calculus is required. A previous contact with structured programming techniques will be helpful. The level of the text is aimed at advanced undergraduate and graduate students and researchers. The few sections that contain more advanced mathematical material can be omitted upon a first reading of the book. All algorithms are developed in detail, in a unified notation, and according to a coherent methodology. This is not an encyclopedia of recipes. Rather, the book stresses the methodology behind developing one's own concurrent programs for scientific computing. The approach is new because the text introduces formal program development to scientific computing. Readers can expect to cut down the time needed to develop concurrent programs. By following the same methodology, the user's programs will be easier to integrate into libraries, easier to use, and portable to a wide variety of concurrent computers.

From reader reviews:

Alberta Smith:

Now a day people who Living in the era where everything reachable by connect to the internet and the resources within it can be true or not require people to be aware of each facts they get. How individuals to be smart in obtaining any information nowadays? Of course the reply is reading a book. Studying a book can help folks out of this uncertainty Information mainly this Concurrent Scientific Computing (Texts in Applied Mathematics) book since this book offers you rich details and knowledge. Of course the info in this book hundred pct guarantees there is no doubt in it you may already know.

Jennifer Nava:

Your reading sixth sense will not betray a person, why because this Concurrent Scientific Computing (Texts in Applied Mathematics) publication written by well-known writer whose to say well how to make book that can be understand by anyone who else read the book. Written throughout good manner for you, dripping every ideas and publishing skill only for eliminate your personal hunger then you still uncertainty Concurrent Scientific Computing (Texts in Applied Mathematics) as good book not only by the cover but also by content. This is one e-book that can break don't ascertain book by its deal with, so do you still needing another sixth sense to pick this particular!/? Oh come on your reading through sixth sense already told you so why you have to listening to a different sixth sense.

Della Francis:

Many people spending their time frame by playing outside having friends, fun activity having family or just watching TV all day long. You can have new activity to pay your whole day by reading through a book. Ugh, do you think reading a book can actually hard because you have to take the book everywhere? It alright you can have the e-book, having everywhere you want in your Smart phone. Like Concurrent Scientific Computing (Texts in Applied Mathematics) which is having the e-book version. So , try out this book? Let's find.

Kyle Smallwood:

Don't be worry should you be afraid that this book can filled the space in your house, you could have it in e-book method, more simple and reachable. This specific Concurrent Scientific Computing (Texts in Applied Mathematics) can give you a lot of good friends because by you taking a look at this one book you have thing that they don't and make you more like an interesting person. That book can be one of a step for you to get success. This e-book offer you information that perhaps your friend doesn't realize, by knowing more than some other make you to be great men and women. So , why hesitate? Let me have Concurrent Scientific Computing (Texts in Applied Mathematics).
