Embryology of the Eye and Its Adnexae (Developments in Ophthalmology, Vol. 24) Y.R. Barishak

This monograph approaches the embryology of the eye and its adnexae from the perspective of gestational age, providing a unique overall view of the various structures of the eye at different stages of prenatal development. Embryo-genesis, organogenesis and differentiation are three main periods that can be distinguished in the prenatal development of the human eye. The chapters in this book describe in detail the series of sequential events that occur during these periods from the fertilization of the ovum until birth.
