G. M. Bernstein, M. L. Fischer, and P. L. Richards Department of Physics, University of California Berkeley, California 94720, U. S. A. J. B. Peterson Department of Physics, Princeton University Princeton, New Jersey 08540, U. S. A. T. Timusk Department of Physics, McMaster University Hamilton, Ontario L8S 4M1 , Canada ABSTRACT. Recent measurements of the diffuse background at millimeter wavelengths indicate no departure from a Planck spectrum near the peak of the blackbody curve. Anisotropy measurements indicate no structure, at the 2% level, in the recently detected submillimeter excess. We report here the results of an April 1987 balloon flight of an instrument designed to measure the spectrum of the cosmic background radiation from 1 mm to 3 mm. A description of the instrument can be found in Peterson, Richards, and Timusk (1985). Modifications were made to the apparatus and experimental procedure in order to identify and reduce systematic errors. Results from the latest flight indicate that two effects hamper the interpretation of the data. These systematic effects will be described in detail in a forthcoming publications; they are probably responsible for the non-Planckian spectrum measured by Woody and Richards (1981). Attempts to remove the systematic effects from our data yield the upper limits to the CBR brightness temperature in 4 bands from 1 mm to 3 mm. There is no evidence for an excess of radiation near the 2.8 K blackbody peak.

### **From reader reviews:**

#### **Gloria Taylor:**

Here thing why this Submillimetre Astronomy: Proceedings of the Kona Symposium on Millimeter and Submillimetre Astronomy, Held at Kona, Hawaii, October 3-6, 1988 (Astrophysics and Space Science Library) are different and reliable to be yours. First of all examining a book is good nevertheless it depends in the content of it which is the content is as yummy as food or not. Submillimetre Astronomy: Proceedings of the Kona Symposium on Millimeter and Submillimetre Astronomy, Held at Kona, Hawaii, October 3-6, 1988 (Astrophysics and Space Science Library) giving you information deeper since different ways, you can find any guide out there but there is no guide that similar with Submillimetre Astronomy: Proceedings of the Kona Symposium on Millimeter and Submillimetre Astronomy, Held at Kona, Hawaii, October 3-6, 1988 (Astrophysics and Space Science Library). It gives you thrill reading through journey, its open up your current eyes about the thing that will happened in the world which is maybe can be happened around you. It is possible to bring everywhere like in park, café, or even in your technique home by train. Should you be having difficulties in bringing the published book maybe the form of Submillimetre Astronomy: Proceedings of the Kona Symposium on Millimeter and Submillimetre Astronomy, Held at Kona, Hawaii, October 3-6, 1988 (Astrophysics and Space Science Library) in e-book can be your substitute.

#### **Lauren Robinson:**

Nowadays reading books be than want or need but also get a life style. This reading addiction give you lot of advantages. The huge benefits you got of course the knowledge your information inside the book that will improve your knowledge and information. The data you get based on what kind of reserve you read, if you want attract knowledge just go with schooling books but if you want truly feel happy read one using theme for entertaining like comic or novel. The Submillimetre Astronomy: Proceedings of the Kona Symposium on Millimeter and Submillimetre Astronomy, Held at Kona, Hawaii, October 3-6, 1988 (Astrophysics and Space Science Library) is kind of reserve which is giving the reader erratic experience.

#### **Edna Dixon:**

In this period of time globalization it is important to someone to receive information. The information will make anyone to understand the condition of the world. The health of the world makes the information much easier to share. You can find a lot of personal references to get information example: internet, classifieds, book, and soon. You can see that now, a lot of publisher which print many kinds of book. The book that recommended for your requirements is Submillimetre Astronomy: Proceedings of the Kona Symposium on Millimeter and Submillimetre Astronomy, Held at Kona, Hawaii, October 3-6, 1988 (Astrophysics and Space Science Library) this publication consist a lot of the information on the condition of this world now. This particular book was represented how does the world has grown up. The words styles that writer use to explain it is easy to understand. Typically the writer made some analysis when he makes this book. This is why this book ideal all of you.

**Tessa Krieger:**

With this era which is the greater individual or who has ability in doing something more are more special than other. Do you want to become among it? It is just simple approach to have that. What you need to do is just spending your time little but quite enough to possess a look at some books. One of many books in the top listing in your reading list is Submillimetre Astronomy: Proceedings of the Kona Symposium on Millimeter and Submillimetre Astronomy, Held at Kona, Hawaii, October 3-6, 1988 (Astrophysics and Space Science Library). This book which is qualified as The Hungry Slopes can get you closer in getting precious person. By looking upwards and review this reserve you can get many advantages.
