Information Retrieval: Algorithms and Heuristics (The Springer International Series in Engineering and Computer Science) David A. Grossman, Ophir Frieder

Information Retrieval: Algorithms and Heuristics is a comprehensive introduction to the study of information retrieval covering both effectiveness and run-time performance. The focus of the presentation is on algorithms and heuristics used to find documents relevant to the user request and to find them fast. Through multiple examples, the most commonly used algorithms and heuristics needed are tackled. To facilitate understanding and applications, introductions to and discussions of computational linguistics, natural language processing, probability theory and library and computer science are provided. While this text focuses on algorithms and not on commercial product per se, the basic strategies used by many commercial products are described. Techniques that can be used to find information on the Web, as well as in other large information collections, are included.

This volume is an invaluable resource for researchers, practitioners, and students working in information retrieval and databases. For instructors, a set of Powerpoint slides, including speaker notes, are available online from the authors.

From reader reviews:

William Nix:

With other case, little people like to read book Information Retrieval: Algorithms and Heuristics (The Springer International Series in Engineering and Computer Science). You can choose the best book if you'd prefer reading a book. Provided that we know about how is important any book Information Retrieval: Algorithms and Heuristics (The Springer International Series in Engineering and Computer Science). You can add understanding and of course you can around the world with a book. Absolutely right, since from book you can know everything! From your country until foreign or abroad you will end up known. About simple factor until wonderful thing you are able to know that. In this era, we can easily open a book or perhaps searching by internet product. It is called e-book. You should use it when you feel bored to go to the library. Let's learn.

Nathaniel Cornelius:

Nowadays reading books are more than want or need but also work as a life style. This reading routine give you lot of advantages. The advantages you got of course the knowledge the actual information inside the book this improve your knowledge and information. The info you get based on what kind of e-book you read, if you want get more knowledge just go with knowledge books but if you want truly feel happy read one with theme for entertaining for instance comic or novel. The particular Information Retrieval: Algorithms and Heuristics (The Springer International Series in Engineering and Computer Science) is kind of e-book which is giving the reader erratic experience.

Richard Vedder:

The particular book Information Retrieval: Algorithms and Heuristics (The Springer International Series in Engineering and Computer Science) will bring you to the new experience of reading any book. The author style to clarify the idea is very unique. In the event you try to find new book you just read, this book very suited to you. The book Information Retrieval: Algorithms and Heuristics (The Springer International Series in Engineering and Computer Science) is much recommended to you to study. You can also get the e-book in the official web site, so you can more easily to read the book.

Rona Foret:

In this age globalization it is important to someone to obtain information. The information will make professionals understand the condition of the world. The condition of the world makes the information much easier to share. You can find a lot of recommendations to get information example: internet, magazine, book, and soon. You can see that now, a lot of publisher this print many kinds of book. Often the book that recommended for you is Information Retrieval: Algorithms and Heuristics (The Springer International Series in Engineering and Computer Science) this book consist a lot of the information with the condition of this world now. This specific book was represented just how can the world has grown up. The vocabulary styles

that writer use for explain it is easy to understand. The particular writer made some study when he makes this book. That is why this book suitable all of you.
