This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1922 Excerpt: ...Valley it is only necessary to clear the channel of trees and deadfall and to make an occasional cut-off. Through the southern part of Brookings County, however, the construction of an entire new channel is required for some distance. 10. Intercepting ditches will provide relief for parts of the valley. Several ditches have been planned along either side of the valley to intercept flood waters from the uplands, thus preventing the flooding of large areas of bottom land lying between the bluffs and the river. Portions of these ditches may be constructed most economically in conjunction with highways. 11. Three natural reservoirs can be utilized which will provide a total capacity of approximately four and one-half billion cubic feet. Lake Kampeska and Lake Pelican are so located that it would be difficult to prevent flood waters from flowing into them. By slight improvement, however, their capacity can be considerably increased and the flood discharge more effectively controlled. In order to use Lake Poinsett and Dry Lake to the best advantage a diversion channel must be provided, large enough to fill the lake in a short length of time. By judicious use of the above lakes as regulating reservoirs, run-off from heavy rain storms can be diverted from the river and held until high water has receded sufficiently to allow the water in the lakes to be turned back to the river without causing it to overflow. 12. Improvements sufficient to obtain material flood relief will cost approximately one million dollars. It is impossible to present detailed estimates of cost until it is known the extent to which flood control is desired and definite designs have been prepared, but it is believed that material relief may be obtained within the estimate mentioned and that an i...
